Solution

Modifications to source code of RPC_PAYES_CRETA_FILES report have been provided to enable this functionality. After the implementation of this SAP Note, the behavior adopted to choose which payroll results will be read for a given for period to be processed by the program is the following:

- If Periodo desfasado(SPDES) customer situation is off, payroll results with Indicador de actualidad de registro (SRTZA) equal to 'A' are selected to be processed. This is the current behavior of the report.
- If SPDES customer situation is on (values 01, 02, and 03), the payroll result used in the last productive execution of RPC_PAYES_CRETA_BASES or Modelos de cotización para la Seguridad Social (RPCTC0E0) reports will be considered to be processed by the report. This payroll result is retrieved through the entry stored in the Directorio de resultados de nómina utilizados en el TC (T5EC1) table with the greatest Período principal del TC (T5EC1-PERPR) for a given for period (T5EC1-PERPA).
