Solution

The following methods have been created in the HR_ES_RPC190E0 BAdI:

PROCESS_ARREARS_LOOP (Procesar línea de atraso en process_arrears): this BAdI method is called for each line (parameter IS_SPLIT_PREV_YEAR) in CT_SPLIT_RES_TAB table and, by means of setting the parameter CV_PROCESS_LINE, you can decide if the this line should be processed by PROCESS_ARREARS form of RPC190E0 report. If this method is not implemented, the default behavior is the current one (that is, all lines will be processed). Besides these parameters, all parameters of PROCESS_ARREARS form are passed to this method.

ADJUST_PROCESS_ARREARS (Ajustar datos tras procesar atrasos (process_arrears)): after processing the CT_SPLIT_RES_TAB table in the PROCESS_ARREARS form, this method is called in order to allow to

editing the complete CT_SPLIT_RES_TAB table. Besides this changing table, all parameters of PROCESS_ARREARS form are also passed to this method.
