Please find the original document at <https://launchpad.support.sap.com/#/notes/2410460>

Symptom

The information of a secondary CCC is retrieved incorrectly or the CCC filters do not work as expected when running HCM Spain programs.

Other Terms

&UTIL (for more information, see SAP Note [1071282](#))

Reason and Prerequisites

The date established to see if one CCC is a secondary one may be incorrect in the IS_CCC_IN_RANGE method of CL_HRPAYES_CCC_FILTER class.

This SAP Note is relevant only for Spain.

Good to know: when you install an SAP Note, some prerequisites might be required. The prerequisites are SAP Notes that were already released and that change the same context of the current SAP Note. So, even if these prerequisites are not necessarily related to the symptom of the current SAP Note, you should implement them due to technical reasons.

The following Support Package level is the minimum prerequisite:

Release	Support Package
6.08	HR SP 27
6.04	HR SP 99
6.00	HR SP D3

(For more information, click "HR Support Packages Schedule" in support.sap.com/maintenance-schedule)

Solution

The IS_CCC_IN_RANGE method has been corrected to read CCC information using the Campo de sistema ABAP: Fecha actual del servidor aplicación (SY-DATUM) date if no value is supplied for its IV_DATE parameter.

Good to know: during the piloting phase, this SAP Note may be updated and versioned depending on feedback from pilot customers. After this SAP Note changes to status Released for Customer, it will not be

changed anymore, unless there is a very specific situation that demands changes. In this case, a reason for the change will be specified in the SAP Note.

As a general rule, SAP recommends that you install a solution by applying a Support Package. However, if you need to install the solution earlier, proceed as follows:

1. Use Note Assistant (SNOTE) to implement the correction instructions.

You can find more information about the Note Assistant in SAP Service Marketplace, under [SAP Note Assistant](#).
